(2000) The Parrot's Theorem, is the story of an elderly book-shop owner, Mr Ruche, a single mother with an adopted son and teenage twins, the mystery of a missing theorem, and a talking parrot This detective story is interspersed with fasci-nating stories of famous mathematicians, their contributions and their lives

Completely contractive Hilbert modules and Parrott's example

work out Parrot's example using the notion of complete contractivity rather than dilation, these notions are of course equivalent [cf 12] The methods of [9, 10], seem to work well in the context of the ball algebra but the By the spectral mapping theorem, the maximum eigenvalue of $N(S,A)N(S,A)^*$ is by A. Using the generalized Parrot's theorem, write down an algorithm for finding matrix L which minimizes the largest eigenvalue of $M = M(L) = +2L \ 2L0 + 0 +L0L$; where $= 0$, , and $= 0$ are given matrices First, let us nd the lower bound for the functional to be minimized Note that $\max(M(L)) < r \dots$
